

Environmental DNA

Opening for
submissions
**October
2018**

A new open access journal dedicated to the study and use of environmental DNA for basic and applied sciences

Environmental DNA will be a fully double-blinded peer reviewed open access journal. The journal will publish papers that pertain to the analyses of environmental DNA (eDNA) (including ancient DNA, non-invasive sampling, diet analyses, metabarcoding, metagenomics, microbial ecology and pathogens) and address questions of both basic and applied relevance. Research areas (and non-exclusive examples of applications) of interest to *Environmental DNA* include but are not limited to:

- **Experimental eDNA work:**
Testing the impact of physico-chemical factors (e.g. natural biogeochemistry and PCR pollutants) on eDNA, degradation, transport, shedding and detection rate, comparing detection and abundance estimate with conventional methods
- **Trophic and community ecology:**
Ecosystem dynamics, functional diversity, predator-prey interactions (e.g. diet analysis), host-associated microbiota
- **Palaeo-environments:**
Past species and community diversity and abundance measurements, inference in space and time
- **Biomonitoring, conservation biology:**
Single- and multi-species detection, comprehensive biodiversity at different scales, abundance estimates, detection of rare, cryptic and endangered species, non-invasive sampling, management (e.g. fisheries), occurrence and detection estimates
- **Invasion biology:**
Early species detection at low abundance, passive surveillance, impacts on ecosystems, vectors and pathways of dispersal
- **Environmental assessment:**
Impacts of pollutants and other environmental disturbance on species and communities, microbial source tracking (fecal bacteria or pathogens)
- **Physical eDNA properties:**
Uptake and transformation based on geochemistry, particles, organic chemistry or microbial community
- **Techniques and methods:**
Engineering development, developing, testing and evaluating eDNA biotechnology and biostatistical approaches
- **Applications in citizen science and biodiversity education**

Environmental DNA

A new open access journal dedicated to the study and use of environmental DNA for basic and applied sciences

EDITOR-IN-CHIEF:

Louis Bernatchez

Université Laval, Québec, Canada

ASSOCIATE EDITORS:

Kristy Deiner, *University of Zurich, Switzerland, and Museum of Natural History, London, UK*

Dagmar Frisch, *University of Birmingham, UK*

Thomas Gilbert, *Natural History Museum of Denmark*

Daniel Heath, *University of Windsor, Ontario, Canada*

Margaret Hunter, *U.S. Geological Survey, USA*

Michael Stat, *Macquarie University, Sydney, Australia*

Philip Francis Thomsen, *Aarhus University, Denmark*

Taylor Wilcox, *National Genomics Center for Wildlife and Fish Conservation, Montana, USA*

Hiroki Yamanaka, *Ryukoku University, Otsu, Japan*

All articles published by *Environmental DNA* will be fully open access: immediately freely available to read, download and share

**OPENING FOR SUBMISSIONS
